

SEALED PRESSURIZED INK CARTRIDGE

Writes underwater, upside down, at any angle, extreme temperatures from -30° F (-35° C) to $+250^{\circ}\text{ F}$ (121° C), over grease, 3 times longer than the average pen, etc. Our pens are proudly made in the USA, environmentally friendly and unconditionally guaranteed.

When astronauts began to explore the outer reaches of space, Paul Fisher realized that there was no existing pen which could perform in its freezing cold, boiling hot vacuum.

Countless experiments and a common sense approach to findings resulted in the invention of the sealed and pressurized Fisher Space Pen® cartridge and in 1967, after 18 months of rigorous testing by NASA, the Space Pen was selected for use by the astronauts.

Still used on manned space flights, the Fisher Space Pen is unconditionally guaranteed to give outstanding service both here on Earth and in space.

Sliding float separates
ink from pressurized gas

Ultra-hard Tungsten
Carbide Ball

Stainless steel precision
socket prevents leaking
yet delivers uniform
ink flow

Thixotropic ink in a
hermetically sealed,
pressurized reservoir
writes three times
longer than an ordinary
ballpoint

The Fisher Space Pen® is the ultimate in dependability. Every Space Pen is guaranteed to perform in temperatures from -30° to $+250^{\circ}\text{ F}$, underwater, in zero gravity, at any angle— even upside down! Its reliability means it's the only pen you'll ever need.

The Fisher Space Pen is the choice of ski patrols, search and rescue teams, law enforcement agencies, armed forces, and everyone who demands reliability in a writing instrument.

Each Fisher Space Pen is precision assembled, hand tested, and carries an unconditional lifetime guarantee.

Paul C. Fisher
